#ScottishSummit2022

Microsoft Power Platform

The low-code platform that spans Office 365, Azure, Dynamics 365, and standalone applications

Best practises for

IT

(Citizen) Developer

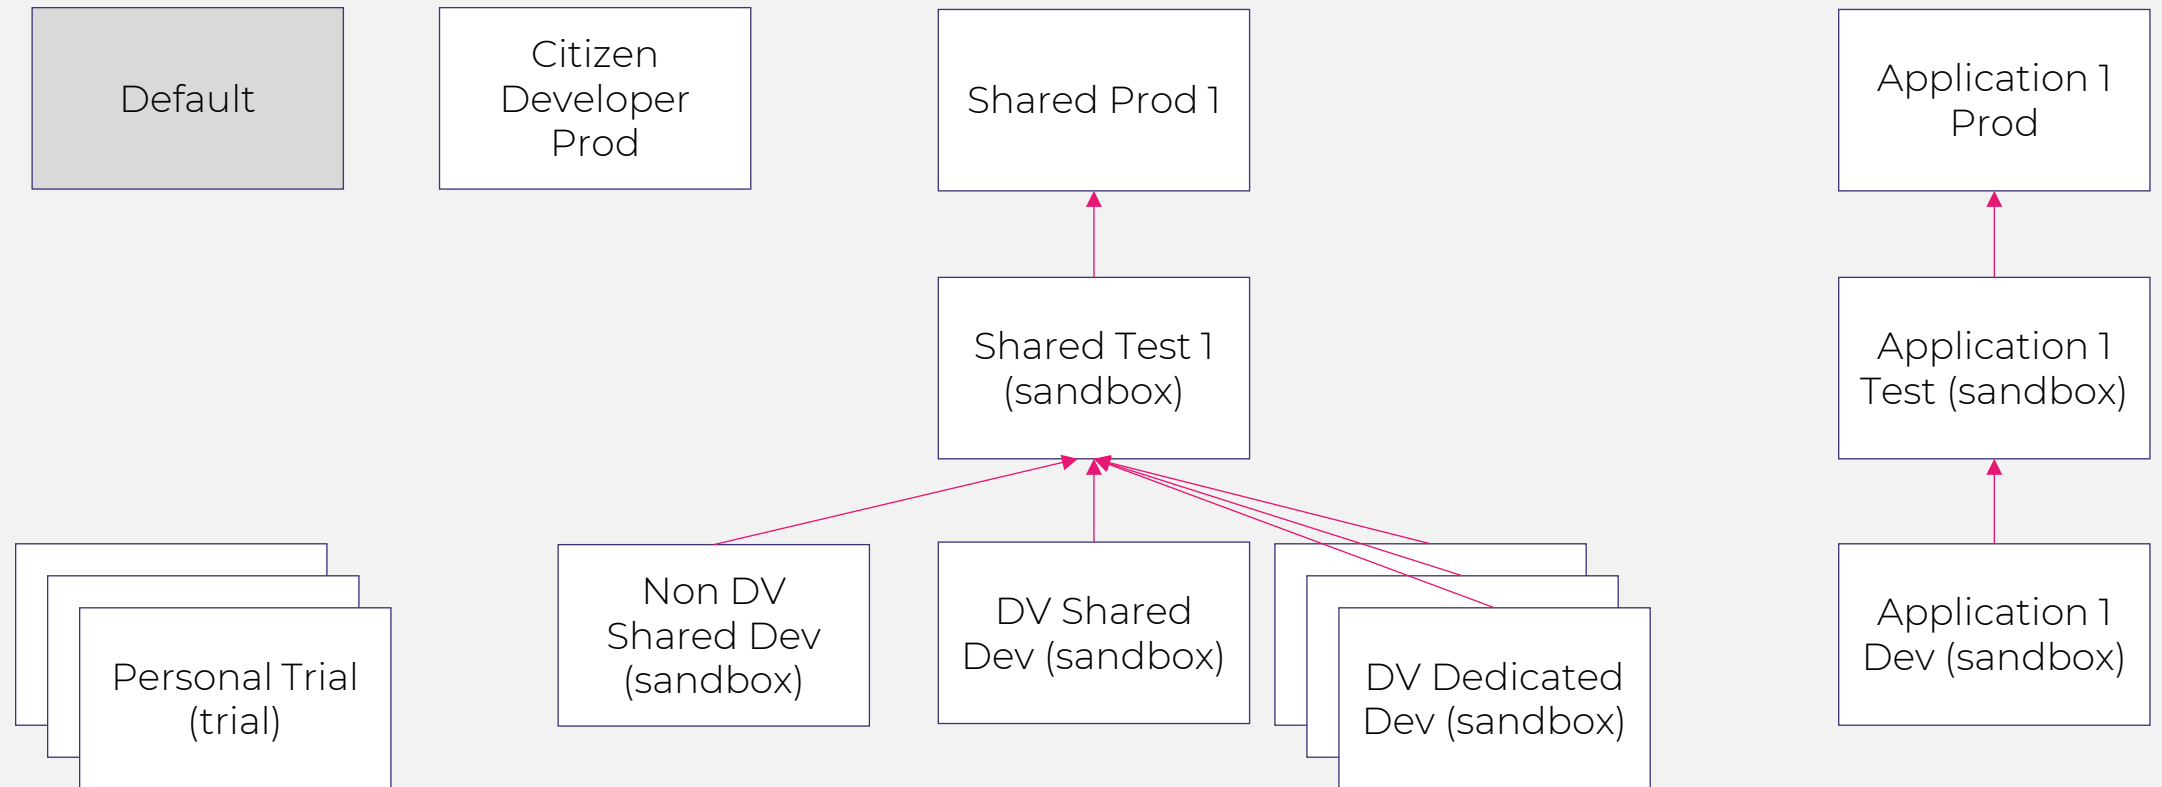

IT

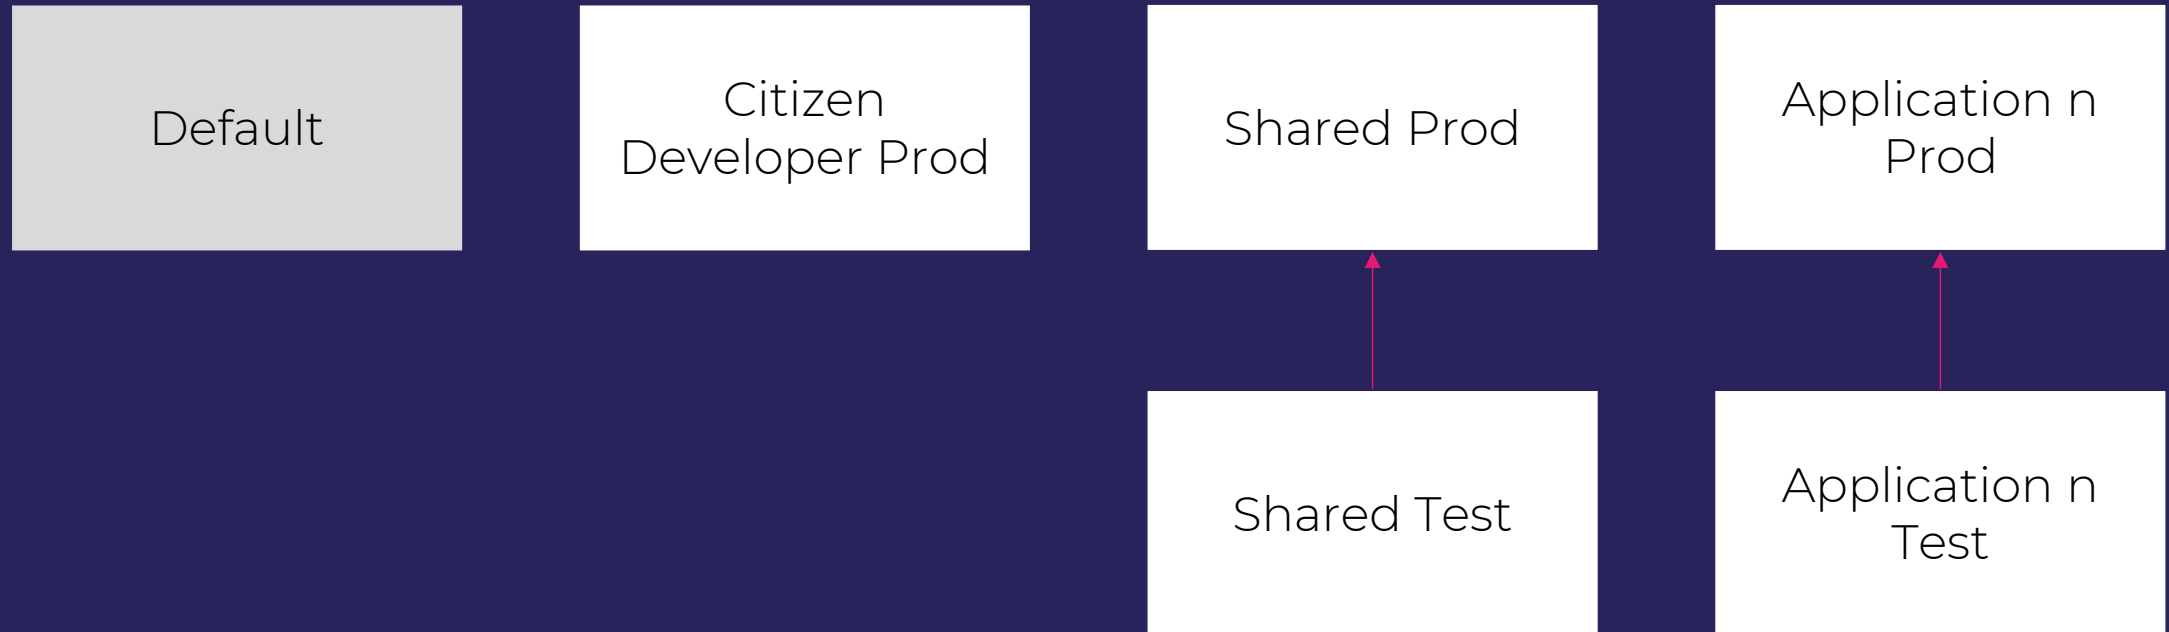

Environments

Forward Forever example architecture

Power Platform

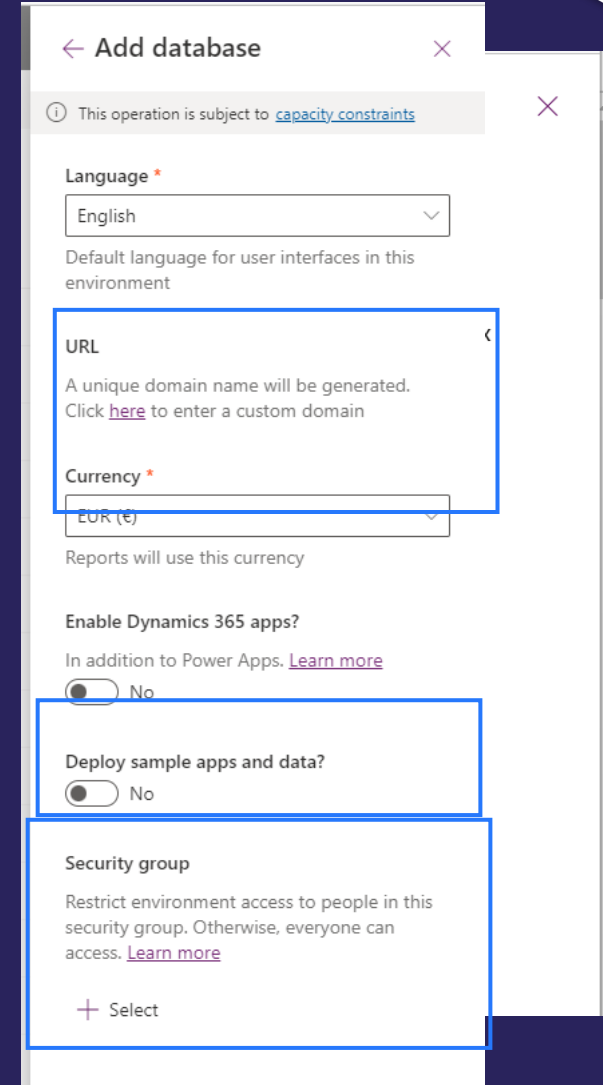

Bare minimum?

To be considered

- Restrict permissions for creating new environments
- Enable tenant-level analytics
- Add security group for the environment during the creation process

A screenshot of the 'Add database' configuration window in a software interface. The window has a title bar with a back arrow and a close button. Below the title bar is a warning message: 'This operation is subject to [capacity constraints](#)'. The main content area includes several sections: 'Language' with a dropdown menu set to 'English'; 'URL' with a text input field and a note about domain generation; 'Currency' with a dropdown menu set to 'EUR (€)'; 'Enable Dynamics 365 apps?' with a toggle switch set to 'No'; 'Deploy sample apps and data?' with a toggle switch set to 'No'; and 'Security group' with a text input field and a '+ Select' button. The 'Security group' section also includes a note about restricting environment access.

← Add database

ⓘ This operation is subject to [capacity constraints](#)

Language *

English

Default language for user interfaces in this environment

URL

A unique domain name will be generated. Click [here](#) to enter a custom domain

Currency *

EUR (€)

Reports will use this currency

Enable Dynamics 365 apps?

In addition to Power Apps. [Learn more](#)

No

Deploy sample apps and data?

No

Security group

Restrict environment access to people in this security group. Otherwise, everyone can access. [Learn more](#)

Data loss prevention policies

Business connectors

Non-Business connectors

Blocked connectors

Blocked endpoints

Blocked actions

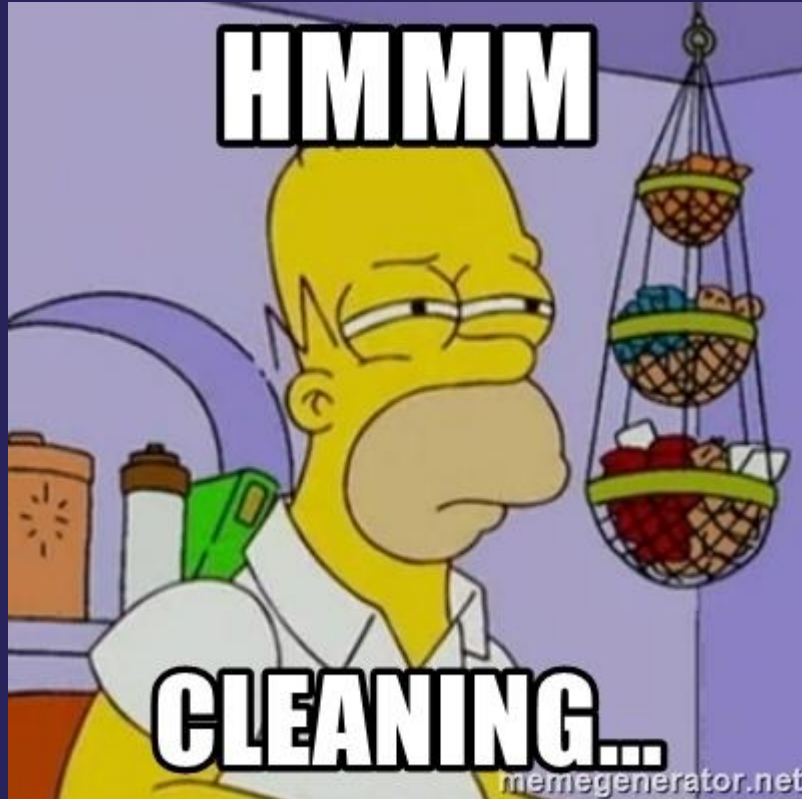

Data loss prevention policies

- You can scope your policies to
 - All environments
 - All environments excluding selected ones
 - Selected environments
- You can have several layers of DLP policies

Flow – User accounts and connections

- Use service account's connections (or service principal with the Dataverse)
- Be extra carefully with secrets (passwords, API keys, keyvault secrets etc)
- Be super super carefully when sharing the flow

Have regular cleaning days

- Clean your Default environment (orphans / not used apps and flows etc)
- Move important / widely used solutions from Default to the proper environment.
- Check your capacity
- Check Power Platform requests
- Validate your environment strategy
- Validate your DLP policies
- Update Gateways

Avoid copy pasting the code

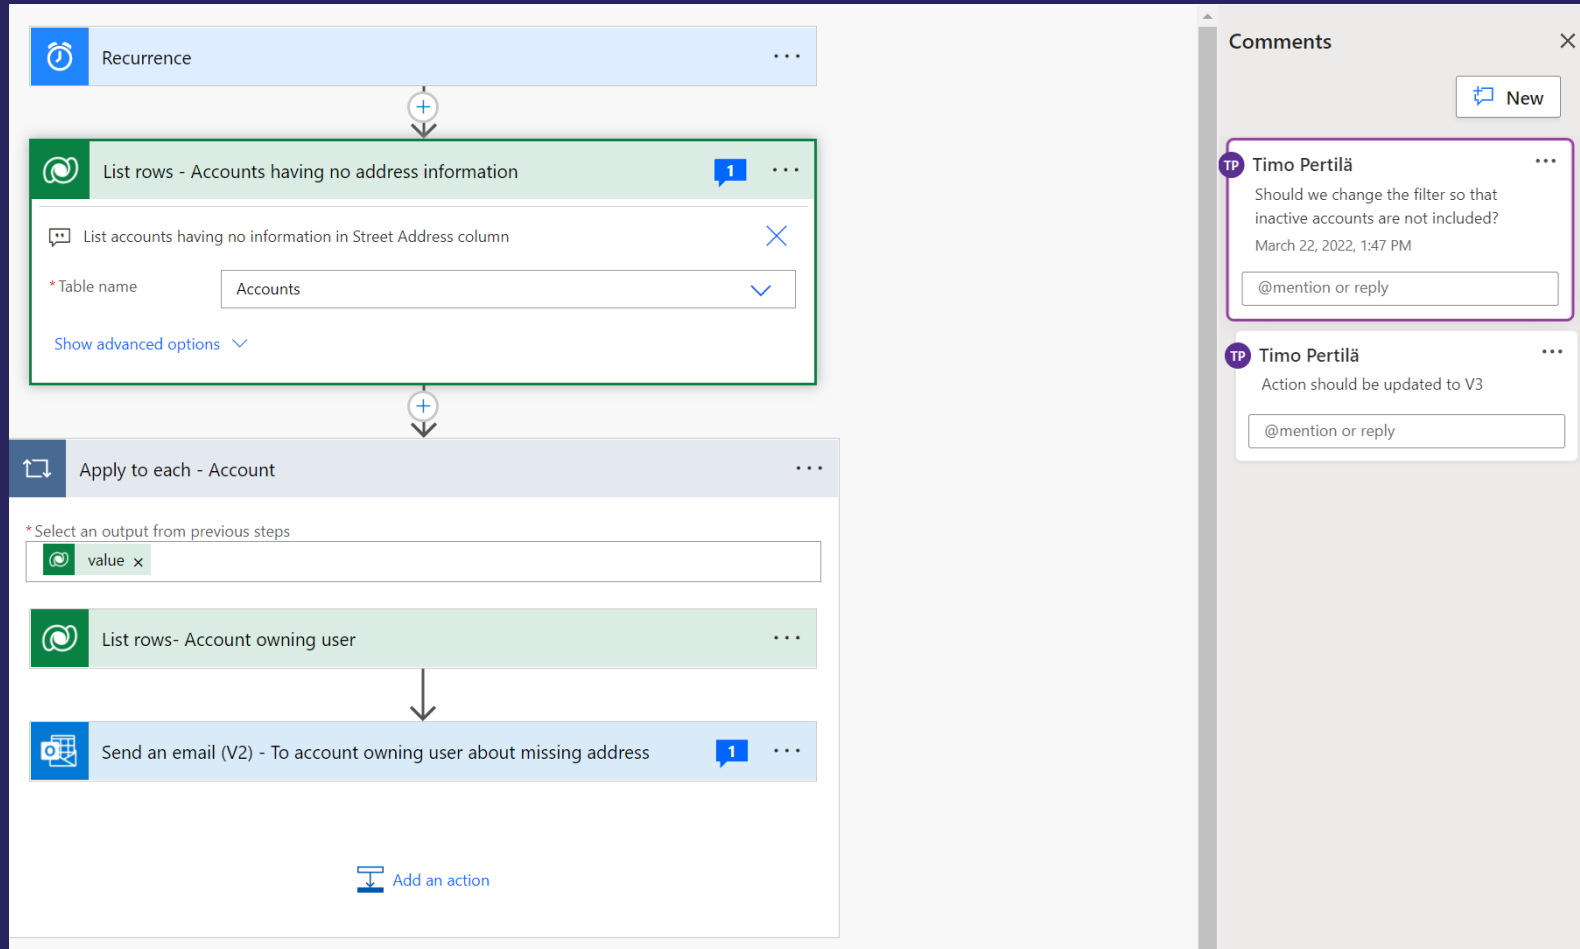

- Components
- Hidden buttons
- Refer to the another controls instead of copying the code

Flow – Naming actions

Flow – Notes & comments

The image shows a screenshot of a Microsoft Flow canvas and its associated comments pane. The canvas is divided into two main sections. The top section, titled "Recurrence", contains a step "List rows - Accounts having no address information". This step has a filter "List accounts having no information in Street Address column" and a table name "Accounts". The bottom section, titled "Apply to each - Account", contains a step "Send an email (V2) - To account owning user about missing address". The comments pane on the right shows two comments from Timo Pertilä. The first comment asks if the filter should be changed to include inactive accounts. The second comment suggests updating the action to V3. Both comments have a response field with the placeholder "@mention or reply".

Recurrence

List rows - Accounts having no address information

List accounts having no information in Street Address column

* Table name: Accounts

Show advanced options

Apply to each - Account

*Select an output from previous steps

value x

List rows- Account owning user

Send an email (V2) - To account owning user about missing address

Add an action

Comments

New

TP Timo Pertilä

Should we change the filter so that inactive accounts are not included?

March 22, 2022, 1:47 PM

@mention or reply

TP Timo Pertilä

Action should be updated to V3

@mention or reply

Error management

- Is your flow / Power Apps aware of errors?
- What you do when error happens?

Flow

 Recurrence ...

 Scope - Get accounts without address information and send email to owners ...

 Scope - On Error ...

 Parse JSON - Workflow() ? ...

 Post message in a chat or channel - Inform IT about the failure ? ...
